Lab 2b Report

1. *How many cycles does your hard coded program take to write 24-bits?*

Using the logic analyzer, it appears that the hard-coded program takes 448 cycles to write a 24-bit pattern.

2. *How many cycles does your new function take to write 24-bits?*

Using the logic analyzer again, the new function takes 800 cycles to write a 24-bit number.
